Risk Treatment Plan for AI Asset A2: User Interaction Records

Developing a Risk Treatment Plan

- The purpose of risk treatment plans (RTPs) is to document how the chosen treatment options will be implemented.

Risk

- There are multiple risks associated with AI User Interaction Records, especially around data privacy, potential biases in user interactions, and misuse of such records to influence user behavior without clear transparency.

Reasoning

- The User Interaction Records are valuable assets which could provide insights into user behaviors and preferences. However, without proper controls, this asset might also expose the organization to privacy breaches, biases, and unethical use of data. Effective controls and measures should be in place to ensure the AI systems using this data are transparent, unbiased, and respectful of user privacy.

Accountability

- Jeremy Doe, Data Management Lead, is responsible for the approval of the RTP.
- Jitu Doe, AI Data Governance Consultant, is responsible for the RTP implementation.

Proposed actions, resources, and performance measures:

Proposed Actions

- Perform an AI system impact assessment to identify potential biases and privacy risks associated with the use of User Interaction Records.
- Develop a protocol for data encryption and anonymization to ensure the privacy of user interactions.
- Implement role-based access controls to User Interaction Records to prevent unauthorized access and potential misuse.
- Train staff on the ethical use of AI and the importance of unbiased algorithms.
- Review and implement relevant clauses from ISO 42001 to ensure full conformance.

Resources

- The AI Data Governance Consultant will oversee the implementation of the RTP.
- Data engineers will be responsible for data encryption and anonymization.
- A dedicated team will be assigned to monitor and review AI systems for biases and conformance to ISO 42001.

- HR will coordinate training sessions on AI ethics.

Performance Measures

- The following performance measures are defined for monitoring:
  1. Successful completion of the AI system impact assessment and remediation of identified risks.
  2. Implementation of data encryption and anonymization protocols.
  3. Monthly audit of access logs to User Interaction Records.
  4. Number of staff trained on AI ethics.
  5. Quarterly conformance review with ISO 42001.

Reporting, Monitoring Requirements, and Schedule

Reporting

- The AI Operations Team will provide a monthly update at the Senior Management Team Meeting.

Monitoring

- Internal audit will review the five performance measures on a semi-annual basis.

Schedule:

- Performance measure 1: 1 Month.
- Performance measure 2: 2 Weeks after 1.
- Performance measure 3: Concurrent with 2.
- Performance measure 4: 1 Month after 3.
- Performance measure 5: 3 months after 4.
